TRIUMVIRATE ENVIRONMENTAL

BSCTest+™

BSCTest+ helps laboratories keep critical containment equipment safe, compliant, and operating - from initial certification through troubleshooting, repair, decontamination, facility coordination, recertification, and ongoing support.

BSC Certification & Testing

- Scheduled BSC certification
- Visual and installation assessment
- Airflow testing
- HEPA-filter integrity testing
- Airflow smoke-pattern testing
- Alarm and control verification
- Applicable ancillary testing
- Certification reporting and labeling

Corrective & Diagnostic Services

- Troubleshooting and failure diagnosis
- Equipment decontamination
- Filter replacement
- Blower and motor repair
- Alarm, control, and electrical repair
- Manufacturer coordination
- Post-repair testing
- Recertification

Coordinated EHS Support

- Facility and exhaust-system assessment
- Cabinet-to-room airflow evaluation
- HVAC and air-balancing coordination
- Installation and relocation support
- Preventive-maintenance planning
- Multi-site program support
- Service records and reporting
- Coordination with EHS, facilities, engineering, and laboratory teams

The BSCTest+™ Difference

Technical expertise beyond routine inspection.

We work from the standards, manufacturer requirements, and your EHS program to help determine the right approach for your operation, whether the goal is stronger containment, safer operations, energy efficiency, or resolving a complex equipment or facility issue.

One team from inspection to resolution.

When equipment fails, don't start over with another vendor. Our BSCTest+™ experts help every step of the way, from decontamination and troubleshooting to repair coordination, retesting, and recertification. All of this is planned and performed to address facility conditions and manufacturer best practices.

Full documentation and visibility.

From diagnostic and corrective work to decontamination, testing, and certification, BSCTest+™ provides all relevant documentation to help your team maintain visibility and effectively demonstrate that equipment is up to par—regularly or after breakdown events.

TRIUMVIRATE ENVIRONMENTAL

Certification Is Only the Beginning

A certification sticker tells you a machine was tested. BSCTest+™ goes further.

Coordinated Effort

Our experts arrive onsite ready to assess your equipment and surrounding, related systems from end to end—from airflow, exhaust, HVAC, installation, equipment condition, and laboratory operations. Our BSCTest+™ experts coordinate across these areas and align with EHS, facilities, engineering, laboratory teams, and manufacturers to thoroughly identify issues and get them resolved.

Operational Knowledge

Beyond the equipment and the technical environment, our teams understand the operational and personnel synergy required for success. That means we help clients work through the nuances of their particular application within the context of their production process rather than defaulting to a one-size-fits-all approach.

Expanded EHS Support

BSCTest+™ works across applicable standards, manufacturer requirements, facility procedures, and EHS program expectations (including regulatory and compliance requirements) to help our clients make informed decisions about testing and operating criteria. Our team's value is not simply knowing the test method—it's understanding how those requirements fit together and helping you determine the right path when your needs are more nuanced than a standard inspection can cover.

Your Partner in Biosafety

From recurring certification to complex repairs, facility challenges, decontamination, laboratory moves, remediation, and decommissioning, BSCTest+™ provides the expertise and support to keep your programs moving forward.
