

Hazardous Waste Management (RCRA)

This training program is designed for both new and previously-trained employees and addresses both the state and federal hazardous waste regulations applicable to generators. It is specifically designed to instruct employees in the requirements as they pertain to generating and accumulating hazardous waste in their state and therefore integrates the state environmental department's state-specific requirements which supersede the federal in "authorized RCRA program" states.

Topics

- Background, Applicability, Liability
- Waste Determination, Waste Codes, and Profiles
- Universal Waste Rule
- Generator Status
- Notification and EPA ID Numbers
- Hazardous Waste Manifests, Including e-Manifests
- Land Disposal Restrictions
- Waste Reporting
- Documentation of Training & Training Requirements
- Weekly/Daily Inspections
- Contingency Plan and Emergency Contact List
- Accumulation Area Security and Design Standards
- Satellite Accumulation
- Container Management, Marking, and Labeling
- Preparedness & Prevention
- Waste Minimization

Benefits

- Protect the environment and public health from improper disposal
- Avoid costly penalties for your employer
- Comply with an important regulatory program
- Learn a valuable new skill or hone existing skills
- Survive corporate EH&S audits

Who Should Attend?

Employees who require this training would include those who have a role in handling or otherwise managing hazardous wastes. Those employees may have any or all of the following responsibilities: characterizing wastes, labeling containers, adding waste to containers, maintaining containers in satellite or central accumulation areas, recordkeeping and reporting, reviewing or completing hazardous waste manifests, or oversight of any of the aforementioned activities.
